

Thermo Plus–CPM

Continuous Passive Motion Therapy

Recommended for use during the first phase
of post-surgical rehabilitation

Product snapshot

Thermo Plus–CPMs are recommended for use on various joints and are designed to:

- Reduce edema
- Minimize joint stiffness
- Prevent soft tissue contractures and muscle atrophy
- Improve range of motion
- Reduce pain
- Reduce surgical adhesion

Benefits

Improved outcomes

Patients who use Thermo Plus–CPMs during rehabilitation can expect improved post-operative range of motion.

Improves rehabilitation

Reduces patient rehabilitation time by increasing mobility.

Comprehensive benefits for physicians and patients

For physicians:

Our process is a simple one-page form that usually takes a few minutes to complete. Our representatives will address any questions you may have.

For patients:

To make compliance as easy as possible for the patient, our representative will deliver, set-up, explain and demonstrate therapy equipment at the surgical center, patient's home or office. After the initial set-up, representatives are available to address all patient questions, 7 days a week.

Insurance made easy We contact the insurance provider on behalf of the patient and handle all the necessary paperwork. Most patients receive this treatment at little or no-cost.

"During my time of recovery it was nice to find a company that cares. I was very pleased with the wonderful customer service I received from the ThermoCare Plus team; they were professional, thoughtful and caring."

—Farrah B., 38

Recommended usage for Thermo Plus-CPM

The prescribing physician should direct each patient's specific usage. In general, it is recommended that each patient use the Thermo Plus-CPM 2 to 3 times a day for several hours. It is also recommended that the patient begin increasing post-operative flexion in small increments as soon as possible.

Treatment areas

Thermo Plus-CPMs can be used to treat the following:

- Ankle
- Elbow
- Hand
- Hip
- Knee
- Shoulder
- Toe

A physician may also prescribe use of other products that work in conjunction with the Thermo Plus-CPM. These products may include:

- **Thermo Plus-Cream** (transdermal analgesic cream) is used to reduce pain and the need for oral medication
- **Thermo Plus-System** can help patients experience a reduction in pain and inflammation
