

Thermo Plus–System

Solid State Thermal Compression Therapy

*It's the evolution of pre-surgical, post-surgical,
and post-injury rehabilitative therapy*

Thermo Plus–System is a highly effective therapy that greatly surpasses the benefits of traditional ice-based therapies by providing cold therapy at a consistent temperature. The Thermo Plus–System also supplies compression therapy, DVT prophylaxis and contrast therapy.

The Thermo Plus–System patient benefits

Reduced pain with less medication

On average patients experience less pain and swelling when compliant with the Thermo Plus–System therapy, which may result in a reduced need for pain-relieving medication.

The Thermo Plus–System clinical benefits

Improved outcomes

When the Thermo Plus–System is used during rehabilitation the patient can expect reduced pain and swelling, improved range of motion and shorter healing time.

Superior safety

Other therapy systems rely on ice as the primary coolant which increases the risk of thermal tissue damage. The Thermo Plus–System offers consistent temperature control to prevent thermal tissue damage caused by ice.

Comprehensive benefits for physicians and patients

For physicians:

Our process is a simple one-page form that usually takes a few minutes to complete. Our representatives will address any questions you may have.

For patients:

To make compliance as easy as possible for the patient, our representative will deliver, set-up, explain and demonstrate the equipment at the surgical center, patient's home or office. After the initial set-up, representatives are available to address all patient questions, 7 days a week.

Insurance made easy We contact the insurance provider on behalf of the patient and handle all the necessary paperwork. Most patients receive this treatment at little or no-cost.

Patient compliance

Compliance can be an issue. With our easy to use, portable system patients are more likely to comply with the regiment prescribed by the physician.

ThermoCare
PLUS

"I used the Thermo Plus–System prior to and after each of my surgeries. I was very impressed with how effective it was in reducing my pain and swelling. Both the doctor and I were extremely happy and satisfied with the results."

—Farrah B., 38

Reduce your risk of DVT with the Thermo Plus–System

According to the Surgeon General, it is estimated that at least 350,000 to 600,000 Americans each year suffer from DVT. Delivery of variable gradations of external pressure around the circumference of the leg to improve venous circulation delivered by the Thermo Plus System have been proven to reduce the risk of morbidity and mortality associated with DVT and PE following surgery—usually with little to no need for medication.

Superior benefits

- **Cold** Maintains a consistent temperature without the need for ice
- **Compression** Provides alternating intermittent programmable compression
- **DVT prophylaxis** Reduces the risk of deep vein thrombosis (DVT)
- **Contrast Therapy** Alternates from hot to cold for better pain management

Indications

- **Pain** Pre-op, post-op, rehab, post-injury
- **Edema** Reduces edema
- **Lymphedema** Treats disorders associated with vascular or lymphatic insufficiency like Chronic Venous Insufficiency (CVI)

A physician may also prescribe use of other products that work in conjunction with the Thermo Plus–System. These products may include:

- **Thermo Plus–Cream** (transdermal analgesic cream) is used to reduce pain and the need for oral medication
- **Thermo Plus–CPM** can help patients experience a reduction in pain and a greater range of motion
