

Thermo Plus–Wraps

Thermo Care Therapy Wraps

*A superior alternative to
traditional ice-based therapies*

Thermo Plus–Wraps

Thermo Plus–Wraps are used in conjunction with the Thermo Plus–System for optimal pre-surgical, post-surgical and post-injury rehabilitative therapy. This highly effective system greatly surpasses the benefits of traditional ice-based therapies by supplying cold therapy at a consistent temperature. The Thermo Plus–System also supplies compression therapy, DVT prophylaxis and contrast therapy.

Why choose Thermo Plus–Wraps

- Available for all body parts
- Latex-free
- Single-use wraps
- Will not adhere and therefore can be applied directly to skin

A physician may also prescribe use of other products that work in conjunction with the Thermo Plus–Wraps. These products may include:

- **Thermo Plus–Creams:** Transdermal analgesic cream is used to reduce pain and the need for oral medication
- **Thermo Plus–CPM:** During rehabilitation, patients experience reduced pain and a greater range of motion
